

Note: We recommend completing [Java Stdin and Stdout I](#) before attempting this challenge.

There are three lines of input:

Output Format

There are three lines of output:

1. On the first line, print `strings` followed by the unaltered String read from stdin.
2. On the second line, print `Doubles` followed by the unaltered double read from stdin.
3. On the third line, print `Int` followed by the unaltered integer read from stdin.

To make the problem easier, a portion of the code is already provided in the editor

Note: If you use the `nextLine()` method immediately following the `nextInt()` method, recall that `nextInt()` reads integer tokens; because of this, the last newline character for that line of integer input is still queued in the input buffer and the next `nextLine()` will be reading the remainder of the integer line (which is empty).
